Why do we need to learn Service Design?

Copyrights: Shamit Shrivastav

An abstract graphic on the right side of the slide, featuring a dense network of glowing blue lines and dots that form a spherical, web-like structure, resembling a molecular model or a complex network diagram.

GDP contribution of different sectors

Industrial Revolution

(1760 – 1840; 1850 onwards)

People spent hours performing mindless tasks in exchange for wages. This new, imposed separation meant people no longer connected work with pleasure and this ended up leading to the separation between work routines and creativity.

Prioritize production efficiency over customer experience and satisfaction.

Fordism - a movement that gained its name after Henry Ford, the creator of assembly lines and the intellectual father of mass production

Arts and Crafts Movement (1860-1910)

On one hand, artisans had a meticulous and mindful construction routine that entailed a deep understanding of materials and production process, mastering a range of relevant crafts that were passed down between generations.

Bauhaus Era (1919 onwards)

According to the Bauhaus, industrial leaders also needed to learn from the era of artisan practices, where there were a mix of arts and handcrafts. This was not a call to go back to the old workshop, but to find inspiration and create new approaches capable of incorporating multi-disciplinary human values into manufacturing practices. The industry would then liberate the potential for creativity, enabling the production of real social and economic value.

In contrast with the Arts and Crafts movement that emerged in opposition to the Industrial Revolution and its technological advances, Bauhaus leader Walter Gropius, along with the Hungarian artist Moholy-Nagy, believed this new breed of professionals should rise from a collision between the humanistic and technological disciplines. Their vision culminated in the construction of an intellectual discourse capable of combining the works of photographers, engineers, artisans, fine artists, architects and the like. Thus, the first Industrial Design School was born.

Industrial Rat Race

We keep competing against ourselves, product-by-product, feature-by-feature, in the pursuit of better and less expensive solutions.

The problem with the rat race is that even if you win, you are still a rat

- Lily Tomlin

Changing need of business over time

In recent decades, with the shift of the focus from technological to human-centered innovations, **production capacity and quality management alone became no longer sufficient** to grant businesses a competitive edge.

The origin and evolution of service design

A new business logic is drastically needed. One that allows us to shift our strategic lens from products (goods) to services, from transactions to relationships, and from ownership to access.

SHARING ECONOMY

Sharing Economy

- The Sharing Economy term, while broadly used, is most appropriately used to refer to collaboration that results in efficiency. The Sharing Economy is an Efficiency Economy. It is the network of collaborative consumption and/or collaborative creation. The term is inclusive of centralized marketplaces in which resources owned, managed, or aggregated by a third-party institution are shared by marketplace users in a manner that results in a higher rate of resource usage than would be expected of a sole user-owned resource.
